## 1. Numpy:

- a. Using NumPy creates a random vector of size 15 having only Integers in the range 1-20.
- 1. Reshape the array to 3 by 5
- 2. Print array shape.

```
#a.1, a.2
arr=np.random.randint(1,20,15)
#reshaping array
arr=arr.reshape(3,5)
#printing array shape
arr.shape
```

3. Replace the max in each row by 0 Create a 2-dimensional array of size 4 x 3 (composed of 4-byte integer elements), also print the shape, type and data type of the array.

```
#a.3
print(arr)
#replacing maximum elements with zero
arr[np.arange(len(arr)), arr.argmax(1)] = 0
arr
#Create a 2-dimensional array of size 4 x 3 (composed of 4-byte integer
elements), also print the shape, type and data type of the array.
arr1=np.random.randint(1,20,(4,3),dtype='int32')
print(arr1.shape)
print(type(arr1))
print(arr1.dtype)
```

b. Write a program to compute the eigenvalues and right eigenvectors of a given square array given below: [[ 3 -2] [ 1 0]]

```
arr2=np.array([[3,-2],[1,0]])
#eigen values and eigen vectors
ev, evec = np.linalg.eig(arr2)
print(ev)
print(evec)
```

c. Compute the sum of the diagonal element of a given array. [[0 1 2] [3 4 5]]

```
#c
arr3=np.array([[0,1,2],[3,4,5]])
#sum of diagonal elements
print(np.trace(arr3))
```

d. Write a NumPy program to create a new shape to an array without changing its data.

Reshape 3x2: [[1 2] [3 4] [5 6]]

Reshape 2x3: [[1 2 3] [4 5 6]]

```
#d
arr4=np.array([1,2,3,4,5,6])
#reshaping to 3*2
arr5=arr4.reshape(3,2)
print(arr5)
print()
#reshaping to 2*3
arr6=arr4.reshape(2,3)
print(arr6)
```

# 2. Matplotlib

- 1. Write a Python programming to create a below chart of the popularity of programming Languages.
- 2. Sample data:

Programming languages: Java, Python, PHP, JavaScript, C#, C++ Popularity: 22.2, 17.6, 8.8, 8, 7.7, 6.7
